Privacy Policy

Apex Dash Formula

Updated: September 24, 2026 | English
Draft for publication review - collection controls and retention settings to confirm.

1. Who we are

Apex Dash Formula ("the App") is developed and published by Quentin Rathonie, trading as RTH Labs, France. RTH Labs is responsible for personal information processed for the purposes described here. Contact: contact@rthlabs.com. Website: rthlabs.com.

2. No account required

You do not need to create an account or provide your name, postal address, phone number or email address to use the dashboards. This does not mean that no personal data is processed: service providers use technical identifiers and process usage, diagnostic and purchase information as described below.

3. Game telemetry and local network

The App receives UDP telemetry from compatible F1 games on your PC or console. Depending on the game and session, packets can include vehicle inputs, speed, RPM, tires, fuel, energy, damage, lap timing, race position and session information. The App uses supported fields to display telemetry for the player car. Telemetry is received over your local network and processed on your device. The App does not intentionally upload raw game telemetry to RTH Labs, Firebase or RevenueCat. Connection events and technical metadata are separate and may be sent for analytics (section 4).

Local network permission lets the App receive game data. Local IP addresses and UDP ports are used to establish the connection. You can revoke this permission in iOS Settings, but live telemetry will then stop working. Game UDP traffic is not encrypted by the App; use a trusted local network.

4. Usage analytics and crash diagnostics

The App integrates Google Analytics for Firebase and Firebase Crashlytics. Analytics may include installation or app-instance identifiers, device and OS information, app version, session activity and approximate country or region. Custom events include dashboard selection, selected game, connection attempts and results, UDP port, connection delay, purchase and restore actions, and purchase error descriptions.

Crash reports may include installation identifiers, stack traces, device and app details, and diagnostic context. These services help us understand feature use and investigate failures. Technical identifiers are pseudonymous, not necessarily anonymous. We do not ask you for a real-world identity to attach to these reports.

Data handling

Apex Dash Formula

5. Purchases and support

Optional in-app purchases are processed through Apple and RevenueCat. RevenueCat uses an app user identifier, generated automatically without an app account, and purchase-related records such as product and transaction identifiers and entitlement status to validate, restore and manage access. RTH Labs does not receive your full payment card details.

If you contact support, we process your email address, message and any information you choose to send in order to respond. Please avoid sending unnecessary personal information or sensitive game/account details.

6. Local settings and storage

Dashboard preferences, customization and connection configuration are stored on your device. The App does not provide CloudKit synchronization for these settings. Apple device backups may include app data depending on your own backup settings. Removing the App normally removes its local app data, but does not automatically delete provider records, purchases, backups or support messages.

7. Purposes and legal bases

Where European data protection law applies, processing necessary to deliver requested dashboards and paid access is based on performance of a contract. Responding to support requests, securing the service and investigating faults may rely on our legitimate interests, subject to your rights. Records required by law are processed to meet legal obligations.

Consent is required for non-essential analytics or access to device information where applicable law requires it. Such processing must not begin before the required consent. Accepting this policy or granting local network permission does not itself constitute analytics consent. The applicable collection controls must match these requirements; this draft is subject to the publication review noted above.

8. Recipients and international processing

Information is processed by Google/Firebase for analytics and diagnostics, RevenueCat for purchase management, and Apple for App Store transactions. Support messages are processed through our email service. Information may also be disclosed when legally required or necessary to establish, exercise or defend legal claims. We do not sell personal information or provide it to advertisers or data brokers for their marketing.

Providers may process information outside France and the European Economic Area, including in the United States. Where required, transfers must be covered by an applicable adequacy decision or appropriate safeguards such as standard contractual clauses. Contact us for information about the safeguards applicable to your data. Provider policies are linked on the next page.

Your privacy rights

Apex Dash Formula

9. Retention

Live telemetry is used for current dashboard operation and temporary in-memory histories rather than a developer-hosted driving archive. Local preferences remain until changed or removed. Analytics retention depends on the Firebase/Google Analytics property settings; the configured period must be confirmed before this policy is published. Google documents a 90-day retention period for Crashlytics crash data and associated identifiers before deletion from live and backup systems begins.

Purchase records are kept as needed to maintain and restore entitlements, resolve disputes and meet applicable legal obligations. Support messages are retained for the request and any necessary follow-up or legal recordkeeping. Provider deletion and backup cycles may delay final removal.

10. Your choices and rights

Depending on applicable law, you may request access, correction, deletion, restriction or portability of your personal information and object to processing based on legitimate interests. Where processing relies on consent, you may withdraw it without affecting the lawfulness of earlier processing. Contact contact@rthlabs.com to exercise your rights or ask about collection controls.

We may need limited information to verify and locate the relevant record because the App does not require a named account. Do not send passwords or payment card details. Removing the App does not by itself exercise deletion rights. You may also complain to your local data protection authority, including the French CNIL at cnil.fr.

11. Children, security and changes

The App is not specifically directed at children. If you believe a child has provided personal information that should not be processed, please contact us. We use reasonable technical and organizational measures to protect information; no storage or transmission method is completely secure. This policy may change as the App or its services evolve. The revised version will show an updated date; material changes will be communicated where required.

12. Provider information and contact
